

Baltimore City Affordable Housing Efficiency Assessment: Work and Retail Access

Being able to live close to work, entertainment, and necessities is important - particularly for poorer families that do not own cars. Affordable and Market Rate housing are very similar when it comes to walking distance to the nearest non-residential urban features. This analysis is very general to make sure that there weren't an over abundance of Affordable Housing projects being located far from any resources. Not all of these commercial/office districts are equal, however. Some areas have very high crime rates and vacant store fronts.

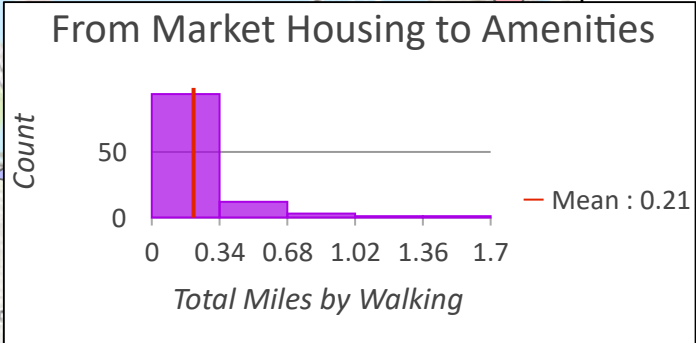

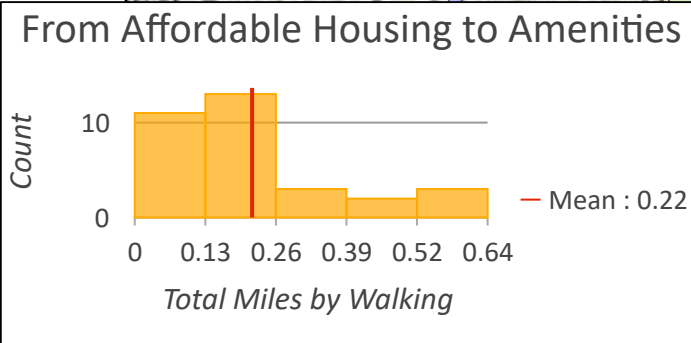

Legend

- Affordable Housing
- Market Rate Housing
- Affordable Housing to Amenities Routes
- Market Housing to Amenities Routes

Office and Commercial Zoning Label

- Commercial
- Office
- Transportation District
